

AMENDMENTS TO THE ABSTRACT

Kindly add the following Abstract after the claims:

ABSTRACT OF THE DISCLOSURE

A data capture system includes a data collection terminal and a wireless communications module comprising a transceiver arranged to transmit and receive radio frequency signals to and from a remote station in the data capture system. At least one flat antenna embedded within the communications module, and a pair of flat antennas may be included. A connector is arranged to removably couple the communications module with the data collection terminal and to transmit signals. A microprocessor is coupled with the connector and is arranged to standardize the logic levels and the format of the signals transmitted over the connector such that the data collection terminal may be engaged by the communications module through the connector without adjustment of the communications module.
